ITC 508 (Deep Learning and NLP) - Final Project

Member Responsibility Matrix (MRM)

Project: BenepiKnow - RAG Chatbot for Philippine Family Planning Rights and Benefits

Member	Final Draft of IEEE Report	Chunking Experiments	Source Code and Reproducibility Package	Experiment Logs and Checkpoints	Chatbot Response Evaluation
Alexsandra Duhac	Wrote the Introduction and the Chunking Configuration results	Evaluated the chunk size results (400, 800, and 1,200 characters) and checked which settings retrieved the expected evidence pages	Wrote the document loading, text cleaning, and chunking code, keeping the source page number of every chunk	Checked the document processing and chunking logs and the chunk size checkpoints	Wrote four test questions with reference answers and graded the chatbot responses using the scoring rubric
Anthony S. Mijares	Wrote the Methodology and the CPU and GPU Performance results	Evaluated the overlap results (50, 100, 150, and 200 characters) and the CPU and GPU benchmark	Wrote the embedding and vector store code (multilingual-e5-small and Chroma) and the index build script	Checked the embedding and vector store build logs, the overlap checkpoints, and the benchmark files	Wrote four test questions with reference answers and checked each reference answer against its source page
Jude Emmanuele D. Pineda	Wrote the Discussion and Conclusion, compiled the references, and did the final check of the paper	Evaluated the top-k results (1, 3, and 5) and the answer quality of the final settings, and recommended 800 characters, 150 overlap, and top-k of 3	Wrote the retrieval and answer generation code, the chatbot web app, and the deployment setup	Checked the retrieval, prompt test, and deployment logs and the top-k checkpoints	Wrote four test questions with reference answers and ran the full question set on the deployed chatbot

The Member Responsibility Matrix was reviewed by all three members. The Final Project Integrity and AI Usage Statement is signed by each member.

The Chunking Experiments, Source Code and Reproducibility Package, and Experiment Logs and Checkpoints are shared group deliverables. The chunking tests were run by the experiment code; each member evaluated the results for their part. Each member is responsible for the part listed under their name and can explain and defend it.
